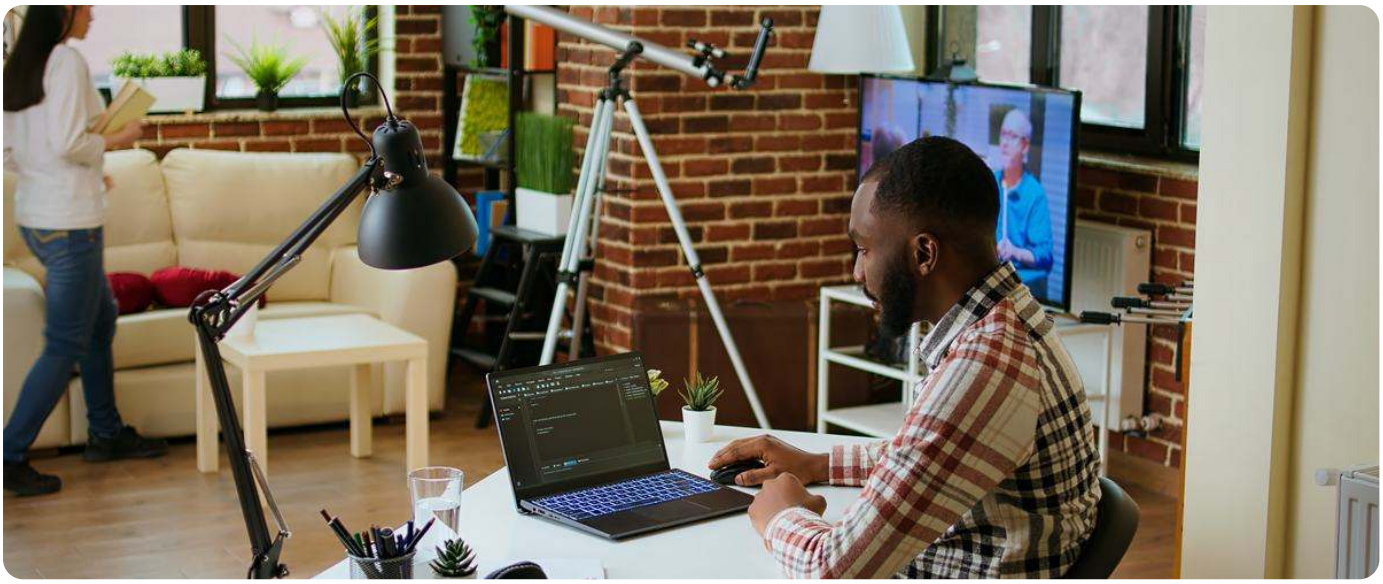
VERSION HISTORY

Version	Date	Change
v28.11.2026	28/11/2026	First publication

> The version in force is the one published at docs.interweb.ao/en/sdks. Printed copies are not controlled: always check the online version.

Contents

1. Before you start
2. API and SDKs
3. WHMCS modules
4. WordPress and automation
5. Infrastructure and DevOps
6. AI tools
7. Questions and issues



The official Interweb repositories are on GitHub, at **github.com/interweb-ao**. They all use this API, they are open source and they carry the MIT license. On this page:

- **Before you start**: The API key and the Sandbox for testing.
- **API and SDKs**: The specification, the aio command and the libraries for PHP, Python and Node.js.
- **WHMCS modules**: Domains, VPS, hosting, AI, E-mail Center and SMS Center in your WHMCS.
- **WordPress and automation**: The WordPress and WooCommerce plugin, n8n, Zapier, Make and domain search.
- **Infrastructure and DevOps**: Terraform, Ansible, GitHub Actions, dynamic DNS and project templates.
- **AI tools**: Skills and plugins for Claude Code, Cursor and other agents.
- **Questions and issues**: Where to report a bug or ask for help.

1. Before you start

They all need an API key, which you create in the **API Center**. Use a `sandbox_` key to test without touching your account and a `prod_` key for real work. See **Authentication** and **Permissions**.

2. API and SDKs

- **api**: The OpenAPI specification and the Postman collection for this API.
- **api-cli**: The `aio` command, for domains, DNS, VPS, SMS, email and AI from the terminal.
- **api-php-sdk**: SDK for PHP 7.4 or newer.
- **api-python-sdk**: SDK for Python 3.8 or newer, with no dependencies: `pip install git+https://github.com/interweb-ao/api-python-sdk.git`

- **api-typescript-sdk**: SDK for Node.js 18 or newer, with TypeScript types: `npm install github:interweb-ao/api-typescript-sdk`
- **php-whois**: WHOIS library for PHP, with availability, registration data, alternatives and prices.
- **laravel**: Package for Laravel 8 to 12, with SMS and email notifications, domains, DNS and WHOIS.
- **homebrew-tap**: Installs the `aio` command on macOS and Linux: `brew install interweb-ao/tap/aio`

3. WHMCS modules

To sell our services to your own customers from your WHMCS.

- **whmcs-domains-module**: Domain module to register, transfer and renew, with DNS and nameservers.
- **whmcs-vps-module**: Server module to create and manage VPS servers from WHMCS.
- **whmcs-hosting-module**: Server module to resell cPanel and Plesk hosting accounts.
- **whmcs-ai-module**: Offers All in One AI to your customers: chat, images, video and voice.
- **whmcs-email-center-module**: Sends every WHMCS email through the E-mail Center.
- **whmcs-sms-center-module**: Sends WHMCS notifications by SMS, through the SMS Center.

4. WordPress and automation

- **wordpress-plugin**: Plugin for WordPress and WooCommerce: emails through the E-mail Center, order notices by SMS and email, signup forms and an AI assistant.
- **api-n8n-node**: n8n node to use domains, DNS, VPS, SMS, email and AI in your workflows.
- **zapier-app**: Zapier app that brings SMS, email, domains and DNS to your other apps.
- **make-app**: Make app to automate SMS, email, domains and DNS without writing code.
- **domain-search-widget**: Free domain search for any website, with availability and prices.

5. Infrastructure and DevOps

- **terraform-provider-interwebao**: Terraform provider to manage VPS servers, domains and DNS records as code.
- **ansible-collection-interweb-ao**: Ansible collection with idempotent modules for VPS, domains and DNS.
- **deploy-on-vps**: GitHub Action that deploys a website to a VPS over SSH.
- **dns-update-action**: GitHub Action that creates, updates and deletes DNS records of your domains.
- **ddns**: Dynamic DNS client that keeps A and AAAA records up to date on OpenWrt routers, Raspberry Pi, Linux, Windows and Docker.

- **templates**: Project templates ready to deploy to a VPS: static site, Node.js, PHP and WordPress with Docker.

6. AI tools

- **agent-skills**: Skills that let Claude Code, Cursor and other agents manage domains, DNS, VPS, SMS and email.
- **claude-plugin**: Plugin for Claude Code, with the MCP server and the skills.
- **cursor-plugin**: Plugin for Cursor, with the MCP server and the skills.

7. Questions and issues

Found a bug in a repository? Open an issue on GitHub, in that repository. Security issues never go in a public issue: report them privately, in the repository's Security tab. For questions about your account, open a ticket in **Meu Interweb**.
